Summary

B.E. Computer Science Engineering student with hands-on practice in cybersecurity labs, network reconnaissance, service enumeration, packet analysis, vulnerability assessment, and web application security. Familiar with Kali Linux, Nmap, Wireshark, Nessus, Metasploit Framework, and OWASP ZAP. Seeking an internship in Ethical Hacking, VAPT, or Penetration Testing.

Education

B.E. – Computer Science Engineering (Third Year, Pursuing)
Sanmati College of Engineering Washim

Technical Skills

Security: Vulnerability Assessment, Penetration Testing Fundamentals, Reconnaissance, Service Enumeration, Security Reporting
Tools: Nmap, Wireshark, Nessus, Metasploit Framework, OWASP ZAP
Systems & Networking: Kali Linux, Linux, Windows, TCP/IP, Networking Fundamentals
Programming: Python (Basic), C
Web Security: OWASP Top 10 concepts; SQL Injection and Cross-Site Scripting (XSS) testing in authorized labs

Projects

DDoS Attack Simulation in an Isolated Lab
Tools: GoldenEye, Hulk, LOIC, Wireshark
Configured an isolated attacker–target lab and performed controlled traffic-load simulations using DDoS testing tools. Captured and reviewed network traffic in Wireshark, then documented the setup, observations, and results in a project report and presentation. Submitted to SkillLogic on 1 November 2026.

Wireshark – Network Traffic Analysis & Packet Sniffing
Tools: Wireshark, TCP/IP
Captured and inspected packets in a controlled lab. Analysed protocol details, source and destination addresses, ports, and traffic behaviour to understand packet-level troubleshooting and security monitoring.

Web Application Security Assessment
Tools: OWASP Juice Shop, OWASP ZAP, Browser Developer Tools
Performed authorized web application security testing in a lab environment, including SQL injection and XSS test cases. Reviewed scanner findings and documented observations as part of a security assessment.

Network & Host Vulnerability Assessment
Tools: Nmap, Nessus, Metasploit Framework, Kali Linux
Performed host discovery, port scanning, service enumeration, and vulnerability assessment in virtual lab environments. Validated selected findings and prepared technical assessment documentation.

Certifications

- Cyber Security Professional Program – Certificate of Completion — SkillLogic
- Certified Cyber Security Analyst (C3SA) — CyberWarfare Labs
- Certified Cybersecurity Foundations (CORE) — Hackviser
- Qualys Certified Specialist – Vulnerability Management Detection and Response — Qualys
- Networking Course — TGM Infotech Pvt. Ltd.
- OPSWAT Cybersecurity Fundamentals Associate (OCFA) — OPSWAT
- Cybersecurity — Tech Mahindra Foundation / Skill India Digital Hub
